                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             injected into xenopus occytes which were assayed for the presence of functional calcium receptors. Both clone types gave rise to functional calcium receptors as assessed by the stimulation of calcium activated chloride currents upon addition of appropriate calcium receptor agonists, e.g. NPS R-467 and NPS R-558. Sequence analysis of the two cDNA clones indicated the existence of at least two sequence variants differing in the 3' untranslated region and which may result from alternative polyadenylation. Sequence variation also exists in the 5' end of the inserts. These sequence differences may have arisen due to alternative transcription initiation and/or splicing. Three additional sites of sequence variation and/or splicing. Three additional sites of sequence variation occur within the coding regions of cDNA clones pHupCaRS. 2 and pHupCaR4.0 demonstrating that they encode distinct additional 30 bp in clone phupCaR5.2 as compared to pHupCaR4.0, results from alternative mRNA splicing. This alternative splicing is predicted to insert 10 additional amino acids into the CaR protein encoded by the phupCaR4.0 between residues 536 and 537 of the protein encoded by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The sequences given in T61381-82 encode functional calcium receptors.

These sequences were isolated from human parathyroid gland adenoma tumour using pBoPCaR1 as a hybridisation probe. mRNA was isolated from a 39 year old caucasian male diagnosed with primary hyperparathyroidism and two clones of approx. 5 and 4 kb were identified. These cDNA's were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        these positions. These two
pharmacologically distinct.

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. I proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

The present sequence encodes human parathyroid CR, designated a pHuPCaR 5.2. The nucleic acid sequence of pHuPCaR 5.2 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat

A method has been developed of screening for a compound able to affec one or more activities of a calcium receptor (CR) comprises: (A) contacting a recombinant cell with a test compound, where the recombinant cell comprises a recombinant nucleic acid expressing the provided that the cell does not have functional CR expression from

The chimeric receptor may be used for screening for compounds that bind to or modulate the active ty of MGR or CR and for determining the site-of-action of a CR active compound. The compounds can be used in the treatment of neurological diseases and disorders. They can also be used as diagnostic agents. Chimeric receptors such as this, allow the coupling of certain functional aspects of an MGR with certain functional aspects of a CR. They allow for more efficient high-throughput screening of compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      comprises an extracellular domain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence encodes

                                                                                                                                                                                                                                                                                                                                                                                                              This cDNA clone codes for dogfish shark kidney calcium receptor related protein (SKCaR-RP, see W32059), an aquatic polyvalent cation sensing receptor (PVCR). It was isolated from a shark kidney cDNA library using a rat kidney calcium receptor cDNA as probe. Also claimed are: a probe comprising the 4131 bp SKCaR-RP sequence; an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of screening for aquatic PVCR aquatic PVCR advants or inhibits aquatic pVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine

The rat kidney calcium receptor gene encodes a 1079 amino acid protein. The tissue from which this receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays.
